Startup Buildathon

— India 2026

Build your next big thing.

Powered by H2S | nasscom | HEADSTART

Team Name: **Dhalam.AI**

Team Size: 2 members | Abhyudaya Marya and Anusha Jain

Problem Statement: Scammers fake the urgency. The savings at risk are real.

Problem Statement

A scam can empty an account. The damage rarely ends there.

₹22,495 cr

Cyber-fraud amount reported in 2025[1]

24.03 lakh

Financial-fraud complaints on NCRP in 2025[1]

25% more

Complaints than in 2024[1]
The pressure is growing.

Fear. Lost sleep. Damaged trust.

IIT Madras interviews with 33 victims in five Indian cities describe shame, insomnia and strained family relationships after financial cybercrime.[2]

When someone says “act now”, people need a safe pause.

[1] MHA / PIB, 11 Feb 2026, NCRP & CFCFRMS. Broader cyber-fraud figures; not a social-engineering-only count.
25% = rounded year-on-year growth from 19,18,835 to 24,02,579 complaints. Data is dynamic. [2] IIT Madras, 29 Sep 2026; qualitative study.

Proposed Solution

Dhalam.AI gives people a second opinion before the next risky step.

01

Check the message

Text, links or screenshots. Shared only with your consent.

02

Understand the risk

Warning signs, concern level and ranked safety actions.

03

Review app access

Search permissions, enabled services and access changes.

04

Take the next step

Ask about access, verify independently or export a report.

THE WIN WE ARE BUILDING TOWARDS

Financial
A pause before paying

Social
Clear evidence to discuss

Psychological
Calm guidance in six languages

Built demo features shown above. Benefits are intended outcomes; financial-loss reduction has not yet been measured.

Solution Architecture

One simple journey: pause, check, understand, act.

USER JOURNEY · NATIVE ANDROID DEMO

FUTURE VISION

A scalable, adaptive cyber-resilience ecosystem

Proposed: Pan-India scale · IoT intelligence · In-call triage · Microlearning · One-click reporting · Adversarial readiness

Google AI Tools

Google AI Studio, Google Antigravity and Google Agent Skills (used or planned to be used).

GOOGLE TOOL / SERVICE	HOW DHALAM USES IT	STATUS
Google AI Studio	Planned prompt-evaluation workspace for false positives, safety failures, and quality across 6 languages.	PLANNED
Google Antigravity	Planned developer workflow to prototype, review, and test new app/backend features.	PLANNED
Google Agent Skills	Roadmap: reusable, auditable device-state checks as tool actions for a supervised Gemini workflow.	ROADMAP
Vertex AI + Cloud Run	Implemented Gemini-based multimodal triage served through an authenticated FastAPI backend in Mumbai.	BUILT
Google Credential Manager	Implemented Sign in with Google; backend verifies the Google ID token.	BUILT
Google Fonts — Noto Sans	Implemented multilingual UI typography for English, Hindi, Marathi, Bengali, Tamil, and Telugu.	BUILT

Google AI Models

Google AI model(s) used or planned for the proposed solution.

Gemini Flash via Vertex AI

- Multimodal analysis of suspicious messages, screenshots, and mixed-language content.
- Produces a bounded, structured assessment: concern score, severity, key warning signs, and ranked safety actions.
- Model version is deployment-config dependent.

gemini-embedding-001 for a RAG Pipeline

- Produces embeddings for retrieving relevant official RBI fraud advisories with sqlite-vec.
- Retrieved source IDs are checked against an allowlist before citations appear in user-facing guidance.
- Grounding with RAG reduces fabricated references

SAFETY & PRIVACY GUARDRAILS

Consent first

User explicitly submits content

Image hygiene

EXIF and location metadata stripped

Constrained output

Pydantic schema + ranked actions

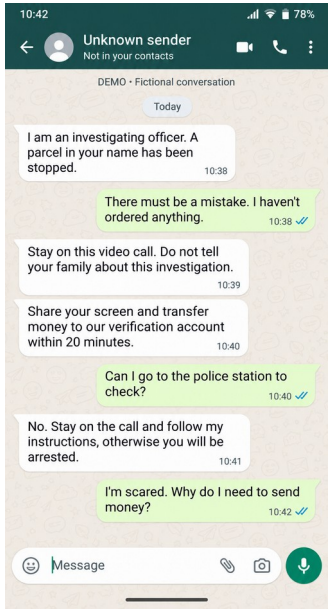

Human agency

Independent verification & 1930 help

From a threat to a clear next step

A fictional “police” demand is flagged, with a practical first action.

FICTIONAL MESSAGE

THE APP RESPONSE · EXCERPT

!

Stop. This looks risky.

This is a classic fake police scam using fear to steal money.

→ End the call immediately and do not transfer any money or share your screen.

Warning signs

! Stay on this video call

A clear first action.

End the call.
Do not send money.
Do not share your screen.

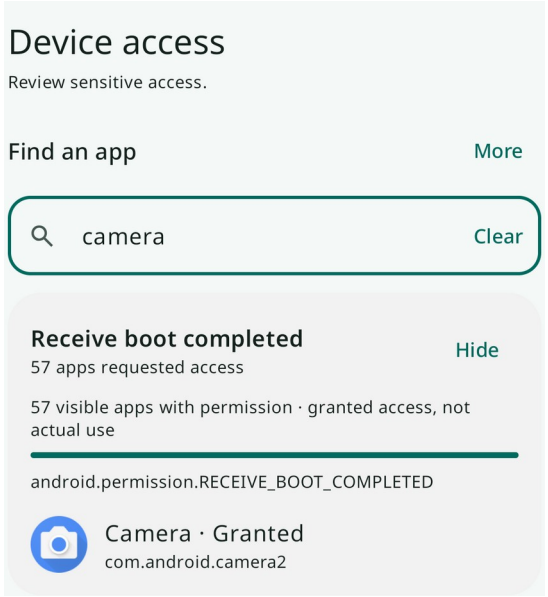

Names the fear tactic.
Highlights the warning sign.

Illustrative demo, not an accuracy benchmark. A model assessment is not proof of fraud.

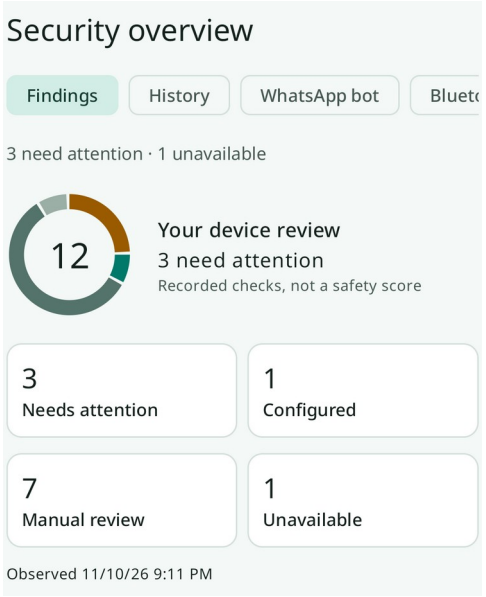

Device access you can explore

Find an app, inspect its permissions, and open findings that need review.

SEARCH & EXPAND

PRIORITIZE THE REVIEW

See what needs your attention.

Search apps and permissions.

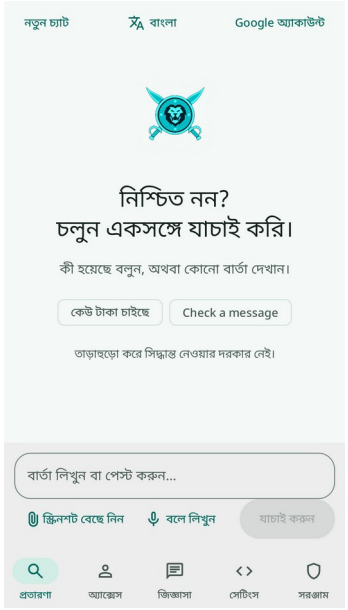

Expand a finding.
Review the next step.

Screens show one demo scan. Granted access does not prove use; the review count is not a safety score.

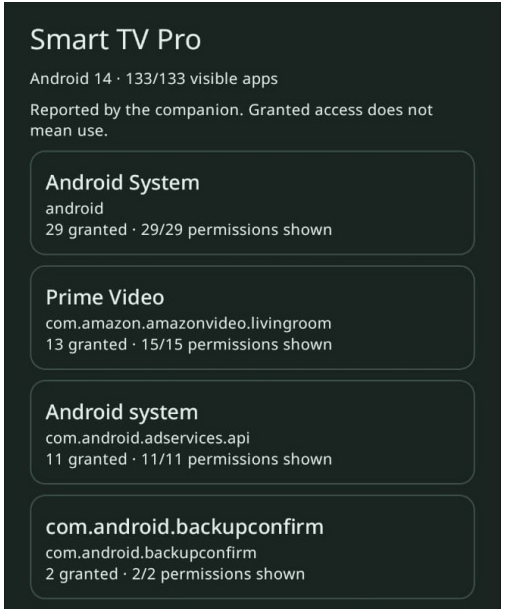

A familiar language. A wider device view.

Bengali interaction on the phone; companion-reported access on Android TV.

BENGALI INTERFACE

ANDROID TV COMPANION REVIEW

Six UI languages

Prompts and key controls adapt to the selected language. Bengali is shown here.

A paired TV, in view

Review apps and grants shared by the TV companion after approval.

TV review requires Dhalam on both supported Android devices and approval to share. Inventory visibility varies by device.

AS-IS (MVP) → TO-BE roadmap

From a working demo to a broader, more proactive defense.

AS-IS · MVP

Today's demo

- User-submitted AI checks
- Searchable device access
- Phone + TV companion
- Six-language interface

Controlled demo

→ **TO-BE · PROPOSED ENHANCEMENTS**

Regional scale

Scale service capacity across India's geographies.

Bite-sized learning

Interactive microlearning for everyday scam awareness.

Broader IoT expertise

Extend risk guidance across connected-device categories.

Real-time, in-call triage

Detection, monitoring and reporting while on call.

One-click cybersecurity mail

Package the incident for user-reviewed sending.

Proactive adversarial drills

Practice scam scenarios before a real attack.

An adaptive defense flywheel for an ever-evolving adversarial landscape.

Proposed enhancements, subject to platform feasibility and user consent.
